

## Spring is on the way!

The QuantumPM team is looking forward to many things this spring: warm, sunny days, new opportunities, and the long-awaited release of Microsoft SharePoint and EPM 2010! We have been working with this software for quite awhile now and are very pleased with its performance and what it has to offer. If you are thinking about moving into the 2010 environment anytime this year, **please contact us for a FREE copy of our recommendations for system setup and migration planning.**

Speaking of **FREE**, we have another great Spring idea!

The first 100 customers who contact us will receive a **FREE** copy of our PowerAid software for PowerPoint. We created this product last year to help us learn about Microsoft's ribbon interface. Since Microsoft Project 2010 will use this technology, we needed to know how it would impact third party additions like QuantumPM creates. It was a fun tool to create and it will save you some time and frustration with repetitive tasks when creating a presentation. **Be one of the first one hundred to [contact us for your license key!](#)**

### 2010 QuantumPM Product and Service Offerings

#### SharePoint Training

Is your organization ready to capitalize on the capabilities available in SharePoint (either 2007 or 2010)? SharePoint development methods are not standardized and easily measured. Many companies think they have a solid foundation only to find that Enterprise SharePoint development is not SharePoint designer based development. To make sure your applications are robust and extensible, we are offering two training classes in SharePoint design. Look on our [website](#) to determine which class is right for you!

#### Innovation Process Management (IPM)

IPM is a great example of a practical application built on SharePoint. Businesses across the globe are using IPM to help them capitalize on the great ideas of their employees and their customers. Give us a call to see how IPM can help your business.

### **SharePoint and Project Portfolio Management --- What to Expect in 2010**

A sure sign of spring: Microsoft just announced an April date for Release to Manufacture of its 2010 Office and SharePoint products; the General Availability date won't be far behind.

The release is very important for the Project Portfolio Management space. The new features of 2010 on the desktop and server make new capabilities, visibility and process available to big businesses and increasingly to smaller businesses. Effectively leveraging these capabilities now becomes the challenge. A large part of the potential represented by the new platform is in its new relationship with SharePoint 2010. As a real SharePoint application, Project Server 2010 can blossom with extended capabilities created by Enterprise SharePoint developers.

If your organization is planning to move to the 2010 product suite, the presentation we offer that gives recommendations for system setup and migration planning may be helpful. You will also need to make sure that your data is ready for migration. We found when migrating from Project Server 2003 to Project Server 2007, migration was smooth when existing system data was scrubbed, analyzed and prepared. The migration from 2007 to 2010 is simpler from the data structure viewpoint but the impact that the new features/functions of Project Server 2010 can have on your processes is much larger! Portfolio Management is a standard capability and SharePoint workflows can be added to help make your corporate practices an automatic part of the way business is done.

## **New Product Releases!**

**JustOnce 3.0 has great new features to make the user and the administrator roles much easier.**

**Resource Forecaster has been updated to allow greater flexibility in what if analysis techniques.**

**WBS Director and Earned Value Manager products offer more capabilities to help you manage your project scope and streamline your EVM analysis process.**

**Thanks for being a valued customer!**
